

LOGISTICS AND SUPPLY CHAIN REPORT

Pahaadi Roots | Enactus IIT Roorkee

Objective

To design an efficient and transparent supply chain that connects Uttarakhand artisans directly with customers nationwide, eliminating middlemen and ensuring maximum value reaches the artisan community.

Logistics & Supply Chain Overview

The proposed supply chain for Pahaadi Roots aims to connect artisans from across Uttarakhand directly with customers while minimising dependence on middlemen. Products will be sourced from local artisan communities at the village level, where they will be collected through designated collection points. The collected products will undergo quality inspection, documentation of artisan stories, and eco-friendly packaging to reflect the brand's 'Every Product Has a Story' identity. After consolidation, products will be transported to Roorkee, which will serve as the central coordination and fulfillment hub. Product information, artisan profiles, and inventory details will be digitally recorded. Orders received through exhibitions, social media platforms, the Pahaadi Roots website, or partner marketplaces will be fulfilled through reliable courier and logistics partners for pan-India delivery. This model ensures efficient product movement, improved market access for artisans, and a transparent supply chain connecting rural producers with urban consumers.

Supply Chain Flow

The diagram below illustrates the end-to-end product journey from artisan to customer:
